

Sprint 3

Nathan Tucker, Andrii Soloviov, Anirudh Kambhampati, Olivia Guess

After updating the libraries, we are trying to run Augur's frontend server. Below are the commands we used and what errors are occurring.

We are working on addressing these issues. Our main goal is to get a working server up on both the main and spg-fix branches, and the ultimate goal is to have no changes in performance between both branches.

Our testing plan is to get the frontend server running on both spg-fix and main. Spg-fix has the updated libraries, and main is the original, unaltered server. We will compare both frontends to see if there are any changes.

Rm package-lock.json

Sudo npm install --verbose --force

Npm audit fix --force

```
